SKILLS

AI/ML: LLMs, RAG, NLP, HCI, Computer Vision, ML Evaluation

Tools: SQL, Jupyter, Tableau, Python (pandas, NumPy, Matplotlib), Zapier, Jira, GPT-4, Claude 3.5, Figma

Methods: A/B Testing, Product Roadmapping, User Research, Agile LLM product design, OKR, Wireframing

EXPERIENCE

Boynton Insurance Group

May '25 - Aug '25

Product Manager Intern | Natick, MA

- Bridged the gap between non-technical stakeholders and cross-functional teams by translating business goals into actionable requirements with ~2-week delivery cycles
- Owned the end-to-end launch of landing pages, from wireframing (Figma) to workflow automations (Zapier), driving a 75% traffic increase from ~20 to ~35 average daily visitors
- Defined product priorities by identifying 3 friction points across claims and policy management workflows, translating findings into 5 roadmap updates owned from intake to deployment

MIT

Mar '24 - May '25

AI Research Assistant | Waltham, MA

- Built and evaluated 4–5 ML models, including LLMs, classifiers, and regressors, each meeting a 90%+ accuracy threshold across datasets ranging from 1,000 - 10,000 data points
- Improved text classification accuracy by 30% through feature engineering and iterative prompt tuning, working 1:1 with a mentor to scope, test, and refine each model
- Applied NLP techniques (spaCy, Scikit-learn) to 1,000+ unstructured text records, contributing to sentiment forecasting and entity recognition pipelines

Accenture

Aug '24 - Jan '25

AI Product Manager Intern | Boston, MA

- Managed requirements and progress tracking across a 4-stage AI product build, keeping engineers and stakeholders aligned from scoping to delivery
- Leveraged A/B testing to identify 7 impact feature opportunities across monitoring workflows, prioritizing a roadmap that reduced churn by 15% year-over-year
- Researched 20+ competitor tools and emerging AI trends to support a product launch that will streamline insights delivery for 50+ client engagements

PROJECTS

EC Firearm Offense Sentencing Tool

Mar '26 - Present

- Prototyping a [web-based tool](#) in collaboration with a High Court judge, to reduce sentencing decision time by ~30% for Eastern Caribbean firearm cases

Tech-News Summarization Engine

Oct '24 - Dec '24

- Coordinated deployment of a tech news summarization engine, integrating LLM and transformer-based models to extract and classify insights from 5,000+ articles across 20+ industries

Predicting Airbnb Availability

May '24 - Jul '24

- Architected a machine learning model to predict Airbnb listing availability with over 85% accuracy by leveraging feature engineering and supervised learning techniques

EDUCATION

Brandeis University

Aug '22 - May '26

BA. in Computer Science & Anthropology | GPA: 3.7

Coursework / Certifications: Programming in Python, Natural Language Processing, User Research, ML Foundations
